# Navigating the Telehealth Landscape

Strategies for Financial Viability and Regulatory Compliance

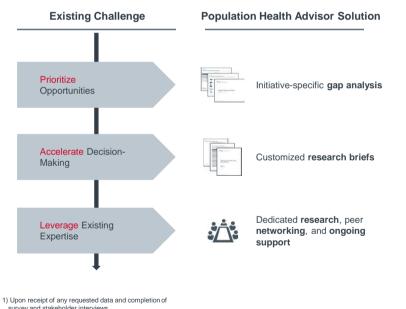

Michelle Seslar Senior Analyst, Population Health Advisor SeslarM@advisory.com

Rene Quashie Epstein Becker Green rquashie@ebglaw.com

# **Introducing Population Health Advisor**

Customized Support for Care Transformation Leaders

Organization-specific analyses to support prioritizing, executing, and monitoring **Population** progress of critical population health initiatives through quantitative and qualitative **Health Advisor** assessments, custom research, and access to expertise

**Inside Population Health Advisor** 

#### **Membership Model**

Population Health Advisor is structured as a 2-year membership. allowing members to access all areas of expertise

#### **Unlimited Analyses**

Members may initiate an unlimited number of customized assessments with one analysis being conducted at a time

#### **Dedicated Support**

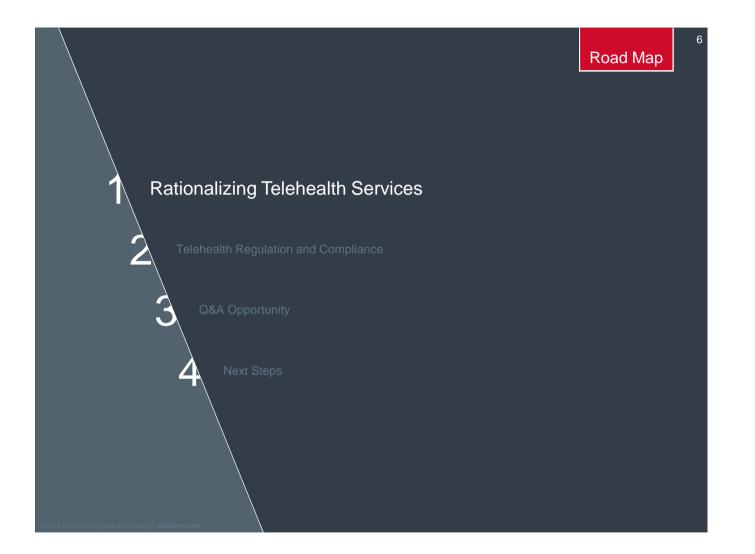

Each member paired with a Dedicated Advisor to understand priorities, ensure project communication, triage requests

#### 4-8 Weeks<sup>1</sup>

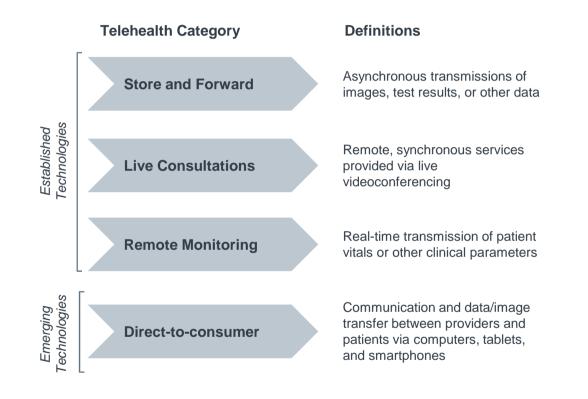

Typical turnaround time for most customized assessments, incorporating quantitative and qualitative analysis

# **Providers Pursuing Alternative Funding Models**

# Alternative Models Often Used Alongside Available FFS Reimbursement

## **Subscription-Based Services**

- Often used for live consultation or monitoring programs
- Remote sites pay a given amount annually or per month for the telehealth service(s)
- Bundles can be created to encourage spokes to take on more than one consult service

# "Per Click" Offerings

- Often used for live consultation or storeand-forward programs
- Remote sites or individuals pay a given amount each time a telehealth encounter takes place
- Best used with remote sites that have low demand for a particular specialty or directto-patient offerings

# Leverage Telehealth to Meet Strategic Goals

# Strategies Supported by Telehealth Deployment

#### Meet Community Care Needs

- Extend specialty care to rural sites
- Leverage provider expertise across large systems
- Eliminate
   unnecessary patient
   and provider travel

#### Capture Additional Market Share

- Offer convenient
   access to otherwise
   inaccessible offerings
- Build relationships that can lead to highacuity patient transfers
- Defend against
   market disrupters

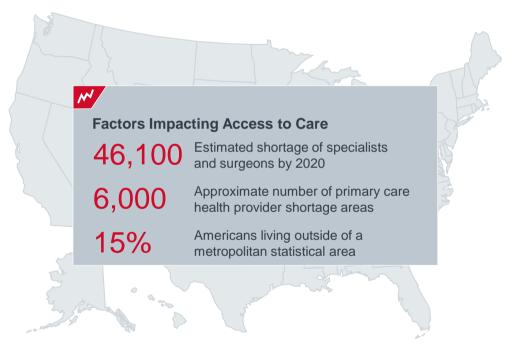

#### Manage Populations

- Encourage timely utilization of health services, including primary and urgent care
- Facilitate prevention and wellness through home monitoring and remote patient management

Strategic Goal: Meet Community Care Needs

# Timely, Convenient Care Still Unavailable for Many

# **Growing Provider Shortages Limit Access**

Strategic Goal: Meet Community Care Needs

# **State Support Enables Telehealth Development**

provided via store-andforward telehealth

13

 Maternal-fetal medicine specialists offer remote ultrasound reads coupled with live consults

# 

#### **Case in Brief: Norton Healthcare**

- Not-for-profit system of five hospitals, 12 Immediate Care Centers, and over 90 practices
- Began developing telehealth fifteen years ago as an access strategy for the surrounding underserved rural community
- State-mandated reimbursement and development of Kentucky Telehealth Network facilitated program growth

Strategic Goal: Meet Community Care Needs

# **Network Investments Led to State-Wide Presence**

Palmetto State Provider Network (PSPN) Connects 80 South Carolina Facilities

# \* \* \* \*

#### MUSC Championed Network Development

Leaders at MUSC joined three other South Carolina health systems to build PSPN with grants from the Federal Communications Rural Healthcare Pilot Program

#### MUSC Leverages PSPN to Offer Wide Variety of Telehealth Services

MUSC asks potential spokes connected to PSPN to identify their specialty care gaps and internally recruits physicians to provide telehealth consults

# •

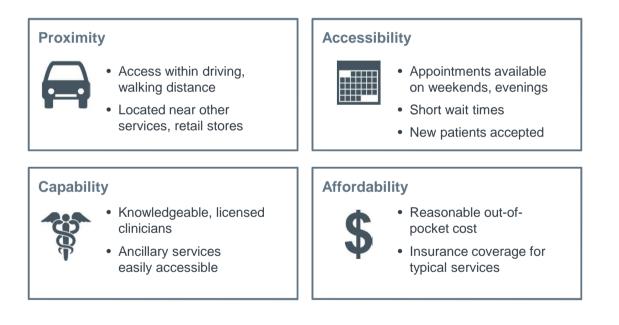

#### Case in Brief: Medical University of South Carolina (MUSC)

- 700-bed academic medical center with 14 primary care practices throughout the state and several specialty clinics
- · Partnered with three other South Carolina health systems to develop PSPN
- Offers telehealth services in MFM, behavioral health, stroke, primary care/wellness, intensive care, and school consultations

Strategic Goal: Capture Additional Market Share

# **Consumer Preferences Driving Delivery Transformation**

# Four Reasonable Patient Expectations

Strategic Goal: Capture Additional Market Share

# Attracting New Volumes Through Convenient Care

#### **Expanding From Covered Populations to the General Public**

#### **Employee Base**

"Franciscan Anytime"

Improve access to reduce costs (avoidable ED visits, treatment delays)

#### Patient Cost

- \$19-\$35 per virtual visit
- \$85-\$90 for home visits
- Free telephonic care

Current Patients "Franciscan After-Hours"

Extend availability of care

for established patients

through after-hours

• \$35 per virtual visit

 $\left( \right)$ 

service

Patient Cost

Provide care on the patient's terms to attract new volumes, extend Franciscan brand reach

```
Patient Cost$35 per virtual visit
```

#### General Population "Franciscan Virtual Urgent Care"

**98%** Reported satisfaction rate from patients using Carena services

M

16

÷-

#### **Case in Brief: Franciscan Health**

- Seven-hospital integrated delivery system based in Tacoma, WA
- Partnered with Carena, Inc. in 2010 to provide virtual care and house calls
- Expanding Franciscan Virtual Urgent Care to general population as new patient acquisition strategy, aiming to generate >1,450 referrals to the system in first year

Strategic Goal: Capture Additional Market Share

# **Building Brand as Innovative Care Provider**

# Mather Health Seeking Market Differentiation through Telehealth Services

Virtual Clinics Offer Specialty Services in Suburban and Rural Settings

- Space dedicated in three facilities for telehealth consults with specialists from Mather's flagship hospital
- Offerings chosen based on community's outstanding clinical needs
- · Service provided at no cost to patients

# Virtual Visits Facilitate Immediate Access to Care or Connection to Established Provider

- Virtual visits offered through online portal
- Patients choose between asynchronous or live consult with a provider within 30 minutes and hearing from their own PCP within 24 hours
- Patients pay out-of-pocket or through insurance

# Ð

# Case in Brief: Mather Health<sup>1</sup>

- Integrated delivery system with over 10 hospitals and 300 outpatient sites
- Transformed telehealth strategy in 2011 from service-line based independent projects to centralized program focused on expanding access to care and investing in next-generation care delivery models
- Pseudonym.

#### Strategic Goal: Manage Populations

# **Telehealth Encourages Right Care at Right Time**

#### Two Common Modalities for Telehealth-Enabled Population Management

#### **Virtual Visits**

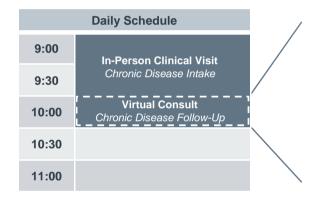

- Includes both video consults and asynchronous consults via a patient portal or email
- Often accessed from the patient's home
- Typically oriented toward urgent care or ongoing chronic disease management
- Ensures timely access to care, which supports disease management efforts and may prevent patient leakage

- Involves placing a monitoring device in a patient's home for daily collection of biometrics
- Nurse or technician monitors data feed and connects with patient and/or care team in the event of negative trends
- Typically used for recently discharged patients or borderline high-risk patients
- May prevent readmissions and disease exacerbations

#### Strategic Goal: Manage Populations

# **Slotting Virtual Follow-Up into Existing Downtime**

#### Offers Virtual Follow-Up Option for Ongoing Chronic Disease Management

- Both phone and video virtual visits are conducted for chronic disease management and follow-up
- In-person clinical visits booked for 60 min, typically run 30-40 min
- 10-20 min virtual consults slotted into excess time throughout the work day

# Ð

# Case in Brief: Massachusetts General Ambulatory Practice of the Future

- · Primary care innovation pilot clinic located in Boston, MA
- Uses multidisciplinary care teams and technology to support both in-person/in-practice visits as well as virtual visits; virtual visits replace in-person visits for disease monitoring/management, weight management, blood pressure monitoring, etc.

#### Strategic Goal: Manage Populations

# **Maximizing Impact of Telemonitoring Data**

#### Tailor Data to Meet Needs of Providers and Patients

Providers receive reports only prior to a patient appointment and when clinical protocols trigger an alert based on a data trend 20

Home care nurses bring record of recent trends to patients to demonstrate link between behavior and health

# 

#### Case in Brief: CentraCare St. Cloud

- Not-for-profit health care system consisting of six hospitals, nursing homes and senior housing communities, and 17 clinics across Central Minnesota
- Began telemonitoring 11 years ago to reduce readmissions among heart failure patients; expanded eligibility to all home care patients based on complexity and readmission risk

# **Trend Toward Streamlining Licensing Process**

# ~/

Current State of Telehealth Licensure Requirements

# >20

Number of states requiring remote providers to become licensed and meet other state requirements

# 10

Number of states offering a telehealth-only license

#### Federation of State Medical Boards Licensure Compact Draft

#### Interstate Medical Licensure Compact

EPSTEIN BECKER GREEN

- Physicians designate a "home state"
- Physicians file an application for expedited licensure with the board of medicine of their home state
- Physicians complete the registration process established by the Interstate Medical Licensure Compact Commission, the body charged with administering the Compact
- Physicians pay any fees required by the board of medicine of the participating state where they are seeking licensure in addition to any other fees established by the Commission

# Many Providers Face Prescribing Barriers

# Wide Spectrum of Online Prescribing Privileges

EPSTEIN BECKER

GREEN

# Ð

### **Case in Brief: Virginia Prescribing Statute**

- Permits a physician to prescribe medication to a patient as long as there is a bona-fide physicianpatient relationship
- Bona-fide physician-patient relationship means the physician needs to conduct a physical exam of the patient either in-person or "by the use of instrumentation and diagnostic equipment through which images and medical records may be transmitted electronically"

# HIPAA Compliance Paramount for Telehealth

EPSTEIN BECKER

GREEN

# **HIPAA Security Considerations**

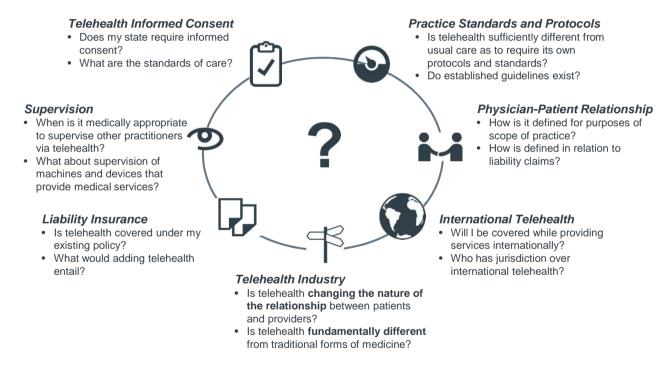

- · Sharing data and management responsibility with other providers
- Determining what should be maintained as part of the medical record
- Complying with privacy laws in multiple states (interstate telehealth)
- Incorporating telehealth risks into compliance program
- Web-based platforms (Skype, etc.) for delivery of treatment
- Transmission security
- Breach notification (verifying breaches)
- HIPAA privacy training and education for telehealth providers
- Business Associate Agreements with technical providers (non-covered entities) supporting telehealth services
- Presence of non-clinical personnel supporting telehealth services
- Distribution of *Notice of Privacy Practices* to telehealth patients

# Liability a World of Unresolved Questions

#### **Common Medical Liability Questions**

EPSTEIN BECKER

GREEN

# Legislators Increasingly Addressing Telehealth GREEN

## **Pending Telehealth Legislation**

#### 1 Telemedicine for Medicare Act

Would allow a Medicareparticipating practitioner who is licensed or otherwise legally authorized to provide a health care service in a state, to provide telemedicine services to a Medicare beneficiary in a different state in which the practitioner is not licensed

#### 2 Veterans E-Health & Telemedicine Support Act

Would allow Department of Veterans Affairs health professionals to provide telemedicine services through the VA to regardless of where the health care professional or the patient is located

#### 3 Medicare Patient Access and Quality Improvement Act

EPSTEIN

Includes provision requiring the US Government Accountability Office to study and report on the use of telehealth in federal programs and identify issues that can facilitate or inhibit the use of telehealth under the Medicare program
